Spatter Pattern Approval for JM Roofing System Urethane Adhesive (RSUA)

Johns Manville is excited to announce the addition of spatter application with [JM RSUA](#). This two-part, low-rise foam is now FM approved for securement of fleece backed membranes with ribbon/bead or spatter pattern.

Spatter is now listed in RoofNav as a secondary option for [JM RSUA](#) applied in ribbons 12" on center. This applies to over 700 assemblies in RoofNav for fleece back securement!

Please reference [JM RSUA](#) data sheet and [Installation Instructions](#) for coverage rates and compatible formats.

Equipment capable of producing spatter application of sprayable two-part adhesives must be used.

Thank you for your continued business and support of JM products. Please contact your JM Representative with any questions.
