JM Introduces Contractor Training Modules

To supplement the Rockdale Training Center courses, the JM Roofing Institute is announcing the launch of the Contractor Training Modules. As part of the JM Peak Advantage® Program, contractors will be able to order modules to create a more focused and customized training for their crew. Based upon their level in the program, contractors will earn a set number of credits for customized Contractor Training Modules each year. The training will take place at the contractor's location, and JM will send material kits and literature ahead of time for training support. Look for additional modules to be added throughout the year.

To schedule Module Training, the contractor will notify their local JM Sales Representative who will coordinate with the local Field Technical Representative. Please see course details below for available modules and training credits:

Contractor level

Altitude Club™

Summit Club®

Pinnacle® Council and 5280 Council™

Training Credits Available

4 Credits

8 Credits

16 Credits

Available modules

TPO Curbs, Corners and Base Attachments
