

Johns Manville's Duct Insulation Knives are designed to smoothly cut fiberglass insulation. The sharp blade cleanly slices through the fiberglass and facing without snagging the material. The wooden handle is easy to hold and curved to fit the hand.

Our duct knives are shipped in master cartons of 100 knives total (10 boxes of 10 knives each/master carton).

If you have questions or would like to learn more about the Duct Insulation Knife please reach out to your distributor or your local JM Market Development Manager.
