

### **Spotlight on Insul-SHIELD Black: New Feature Improves Versatility**

Particularly well-suited for theaters, studios and entertainment facilities, Insul-SHIELD® Black is a fiberglass insulation board dyed to create a black core. The acoustical and thermal properties of Insul-SHIELD and Insul-SHIELD Black are the same. This product controls reverberation and echoes, and with its black board/facing, its opaque surface absorbs light and eliminates back-scatter into viewing areas. Insul-SHIELD Black is excellent for both new and retrofit construction, in projects such as parking structures, curtain walls, mechanical rooms, casinos, power plants, sports arenas and more. Other benefits of Insul-SHIELD Black include:

- Self-supporting rigid board, attached with minimal securement to a variety of surfaces
- Non-corrosive
- Will not rot, mildew or deteriorate
- Unfaced material can be laminated
- Fire resistant and non-combustible (ASTM E136 and ASTM E84)
- Has excellent sound control with relatively thin boards

Insul-SHIELD Black comes in thicknesses of 1-3" and is produced in boards 2'x4' and 4'x8' in size for easy installation.
