Granule Changes to Johns Manville Cool Roof (CR G) APP and SBS Products

Johns Manville is excited to announce a new cool roof granule (CR G) for SBS and APP polymer modified products. The new cool roof granule maintains current Cool Roof Rating Council (CRRC) solar reflectivity values and ratings, Title 24 compliance, performance of the products in the field, installation methods, packaging, codes, and JM Peak Advantage® Guarantee eligibility.

The new granule has increased resistance to foot traffic and improved shelf life. The granules do have a slight visual difference in appearance (see photo). To differentiate between the products, and to ensure a smooth transition, new product SKUs are outlined below. The SKUs below are produced in Macon, GA and JM will begin transitioning production on July 1st. The JM South Gate facility produces APPeX® and Dibiten products and will transition production in the fall. Additional information will be provided to impacted customers in the Pacific Region at that time.

Current SKUs will remain available during this transition to finish in process jobs that require the current granule supply for aesthetic purposes but will be discontinued in Q4 of this year. Please contact your local sales representative as soon as possible if you have anticipated demand for the current supply through the summer and fall months, or if there are any further questions.

Product	Current SKU	New SKU
DynaGlas® FR CR G	90017970	90038714
DynaGlas® FR XT CR G	90017971	90038715
