## Peak Advantage® Guarantee Requirements for Edge Metal with Wind Riders

Johns Manville (JM) strives to provide leading technologies and solutions to assist contractors in being more competitive and successful in the marketplace. This technical bulletin serves as a clarification regarding the inclusion of edge metals within a JM Peak Advantage® Guarantee containing an increased wind speed rider. For the inclusion of edge metals within the JM Peak Advantage Guarantee, the following conditions apply:

- Non-JM edge metals may be utilized and included within the guarantee on wind riders up to and including 100-MPH (with the associated non-JM metal upcharge) when reviewed and approved by JM. The review must be completed a minimum of 2 weeks in advance of the product installation.
- For wind riders exceeding 100-MPH, an approved JM premanufactured edge metal for the desired wind speed will be required.
- Consult JM Technical for wind riders on buildings greater than 60' in elevation for edge metal requirements.

Non-JM edge metals may be utilized on projects requiring over a 100 mph wind rider, however any failure of those systems (and any resulting impact upon the JM roofing system) will not be covered under the Peak Advantage Guarantee.

Please click [here](#) for the referenced addendum.

Any project requesting over a 120 mph wind rider will be required to use JM-provided premanufactured edge metal regardless of the inclusion or exclusion of metal in the Peak Advantage Guarantee coverage.

Please visit [www.jm.com/roofing](http://www.jm.com/roofing) to view the latest specifications and system requirements or contact JM Guarantee Services at (800) 922-5922 option 3.
