## **Guidelines for Repairs with JM White EPDM Peel and Stick Accessories on JM TPO Roofs**

With JM's introduction of our White EPDM Peel and Stick Accessories questions have arisen over their use when making guarantee repairs to JM Guaranteed TPO roof systems.

JM permits the use of its White EPDM accessories for the approved details listed on the TPO "Details and Installation" page of the JM website. Please click [HERE](#) for a full list of the specific details and their requirements.

The approved details include inside/outside corners, scupper flashings, field fabricated pipe penetrations, and end wall transitions.

In all other cases, JM requires the use of traditional heat welded JM TPO products when making repairs to JM Guaranteed TPO roof systems. Specifically, the use of JM's White EPDM Peel and Stick Flashing products is not permitted for repairs of laps, seams or when making field membrane patches (i.e. damage, punctures, etc.). In cases where the use of heat welded products may not be practical, JM recommends the use of our Single Ply Liquid Flashing Products. Please click [HERE](#) for a listing of the products found on the TPO Roofing Systems product page under Liquid Applied.

Please contact the JM Owner Services Team at 1-800-922-5922 if you have any questions regarding JM Guarantee repair requirements or need assistance with product selection for a specific repair condition.

Thank you for your continued support,

**Mandy Schweitzer**
