EPDM Fold Configuration Changes

Effective November 18th, Johns Manville will update the fold configuration on certain 20' and 30' width Non-Taped and Pre-Taped products. We are making this change to improve the production capabilities of our EPDM membrane while maintaining the quality of our folded sheets and Pre-Taped product offerings.

This change will affect the kick-out and unfold direction of the rolls. When staging the rolls on the roof, please review the Kick Out Direction indicated on the label. For Pre-Taped items, also check for the Tape Side Decal. There will be no changes to existing product numbers.

We are managing inventory during this transition to prevent the receipt of products with varying kick-out directions. However, please ensure that you carefully review the labeled indicators.

If you have any questions, please contact your Technical or Sales Representative.
